No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (Operations Staff, P.O. Box 765, Schenectady, New York 12301), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

Contents of Volume 25

Number 1, May 1978

B. Monteil, L. Padel, et J. C. Bernier. Structure et Mecanisme de Cristallisation des Produits Obtenus par Hyper-Trempe dans les Systemes $BaO \cdot Fe_2O_3$ et $SrO \cdot Fe_2O_3$ 1

UTHOR INDEX FOR VOLUME 25 403

The Subject Index for Volume 25 will appear in the December 1978 issue as part of a umulative index for the year 1978.

Information for Authors

The *Journal of Solid State Chemistry* is a research journal devoted to the chemical, structural, thermodynamic, electronic, magnetic, and optical properties and processes of solids. Theoretical and experimental contributions are both welcome. Critical reviews are occasionally presented in selected rapidly developing fields.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Solid State Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscripts may be presented as articles (i.e., conventional full-length expositions) or notes (brief rapid communications of important new work). Notes are limited to 1200 words and are given accelerated review and publication. English, French, and German are the official languages of the Journal. Manuscripts should be submitted to the Editor (M. J. Sienko, Department of Chemistry, Cornell University, Ithaca, New York 14853), or to any member of the Editorial Advisory Board.

Manuscripts should be submitted in triplicate—double-spaced on one side of 21.5 × 28 cm paper. Headings of major sections should be typed in capital letters and centered on the page. Each page of the manuscript should be numbered. Page one should consist of the manuscript title, the author's name, and the author's affiliation. For multiple authors, the author to whom correspondence is to be addressed should be indicated. Page two should consist of an abstract (50–150 words) suitable for use in *Chemical Abstracts*. The American Chemical Society's *Handbook for Authors* or the *Style Manual* of the American Institute of Physics should be followed regarding matters of style and abbreviation.

Tables. Tables should be numbered with Roman numerals in a sequence corresponding to the order of citation in the text. Footnotes to tables are to be placed directly below the table and should be indicated by superscript, lowercase italic letters (^{a,b,c}). Tables longer than two manuscript pages should be submitted as clear, sharp glossy photographs. They will be reproduced by photoengraving and should be designed to fit the Journal page after 50% reduction in each dimension. Errors in such tables cannot be corrected in proof.

Auxiliary Material. In lieu of publication, unusually long tables and sequences of repetitive figures must be deposited with the National Auxiliary Publications Service (NAPS). In particular, structure factor tables must be deposited if, in a clear, proportional, photoreduced format, they would occupy more than one Journal page (this corresponds to a limit of about 1000 F_o and F_c).

For material to be deposited, a deposit fee of $15.00 for up to 98 pages of standard-size or 48 pages of oversize deposited material is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany the deposited material are supplied to the authors by the Editor at the time a paper is accepted for publication. The following footnote (wherein missing numbers are to be inserted by the author in page proof) should be used to reference deposited material.

See NAPS document No. ___ for ___ pages of supplementary material. Order from ASIS/NAPS c/o Microfiche Publications, P.O. Box 3513, Grand Central Station, New York, New York 10017. Remit in advance for each NAPS accession number. Institutions and organizations may use purchase orders when ordering, however, there is a billing charge for this service. Make checks payable to Microfiche Publications. Photocopies are $5.00. Microfiche are $3.00. Outside of the U.S. and Canada, postage is $3.00 for a photocopy or $1.50 for a fiche.

Figures. Figures should be submitted as glossy prints or as original black ink drawings, no larger than 21.5 × 28 cm. Press type is not acceptable. It is important that lettering on drawings be done with a lettering set and be planned to fit the proportion of the printed page. Lettering on the original should be large enought to be legible after a reduction of 50%. The caption of each axis should be lettered parallel to its axis. Background grids should not be included. For half-tone reproductions, glossy, high-contrast, black and white prints should be submitted. Each figure should be identified on the back with the author's name and figure number. Figures are to be cited in the text by consecutive Arabic numerals. Figure captions should be typed as a list on a separate page.

Equations. Equations should be typewritten or clearly handwritten with an Arabic number if necessary for reference placed in parentheses to the right of equation. Reference to equations should use the form "Eq. (3)."

Footnotes. Footnotes to the text should be indicated by consecutive superscript numbers and listed on a separate page at the end of the paper.

References. References should be cited in the text by consecutive underlined numbers in parentheses. The references must appear on a separate sheet, listed in numerical order, i.e., in accordance with order of citation in the text. After the reference number, the author's initials, last name, journal name, volume, initial page number, and year (in parentheses) should be listed in that order. Abbreviations for journal names should follow the style of *Chemical Abstracts' Service Source Index*. For book references, give the author's name, name of book (in quotes), Editor's name (if any), edition (if other than the first), chapter or page number, publisher's name, place and year of publication.

Proofs. Unfolioed page proofs will be sent directly to the author from the printer together with order forms for reprints. There is no page charge.
